OPPORTUNITY SCAN · FOR CEO AND EXECUTIVE COMMITTEE

Schneider Electric SE

Where is the value, and what would management recognise as its own agenda?

Schneider out-grows its peers but converts less of that growth into margin: closing the adjusted EBITA margin gap to the peer median and top quartile is worth €451M–€1.4B a year, the range management's own 2030 margin target already reaches into, plus up to €1.3–2.2B of one-off cash if the receivables gap is real.

Public sources only · As of 2026-10-26 · EUR millions · Latest fiscal year FY25 · 7 peers · EBIT: adjusted where published, else reported · USD peers at the 2025 average euro reference rate (1.1300 USD per EUR); Mitsubishi Electric revenue left in yen · 28 of 28 sources read from search extracts: verify before client use

today → with the gaps closed

1 The situation

In short

1. Growth is not the gap: organic growth of 8.9% ranks 1 of 7 against a peer median of 5.2%, and 2026 guidance has been raised twice.
2. Margin is: adjusted EBITA margin of 18.7% ranks 6 of 7, 1.1 pp below the peer median of 19.9%; closing to median and top quartile is worth €451M–€1.4B of EBIT (112–345 bps).
3. Where the margin gap sits depends on the comparator: against Eaton and Hubbell it is support functions (SG&A 19.9% of revenue against a median of 17.8%); against Legrand and Emerson it is gross margin (rank 4 of 7); and Industrial Automation earns well below the group.
4. Cash: receivables run 89 days against 77 days for peers, worth €1.3–2.2B one-off if the gap is real, and cash matters more once PTC adds new debt.

What the company is facing

- Revenue reached €40.2B in FY25, led by Energy Management and data centres; Industrial Automation grew far more slowly.[1]
- Pricing rose in North America with tariffs while China stayed deflationary.[11]
- Guidance for 2026 has been raised twice, on data-centre demand and a record backlog.[8]
- In October 2026 Schneider agreed to buy PTC, its largest deal ever, funded mostly with new debt; the shares fell on the news.[10]

What management says it is prioritising

Grow organically ahead of the market to 2030, led by data centres and infrastructure

> Targets for 2026 to 2030: organic revenue growth of 7% to 10% a year, an adjusted EBITA margin about 250 bps higher by 2030, cash conversion around 100%, and up to €3.5 billion of buybacks.
> SUMMARY Schneider Electric, Capital Markets Day, as reported by Reuters · 2025-12-11[6]

> Raised 2026 targets for the second time, to 12% to 14% organic revenue growth and 18% to 21% organic adjusted EBITA growth; data-centre demand grew at triple digits in the quarter, with a record backlog and visibility into 2027 and 2028.
> SUMMARY Olivier Blum, CEO · 2026-10-16[8]

Lift the margin through pricing, industrial productivity and support costs growing slower than sales

> Named two main drivers of gross margin: pricing and industrial productivity.
> SUMMARY Schneider Electric management, H1 2026 results call · 2026-07-30[7]

> Support function costs rose 4.2% organically in 2025 while revenue grew 8.9% organically; support function costs were 23.3% of sales.
> SUMMARY Schneider Electric, FY2025 results presentation · 2026-02-26[2]

> Support function costs rose 4.2% organically in 2025 while revenue grew 8.9% organically; support function costs were 23.3% of sales.
> SUMMARY Schneider Electric, FY2025 results presentation · 2026-02-26[2]

Restore Industrial Automation margins under a dedicated recovery plan

> "The adjusted EBITA in industrial automation also improved year-over-year by 50 basis points organic as we implement the margin recovery plan there to reach 18% by 2028."
> Schneider Electric management, H1 2026 results call (speaker not named in the extract) · 2026-07-30[7]

Build an industrial software and AI platform with PTC

> Agreed to buy PTC for about $22.6 billion in cash, calling the combination the industry's most complete software and AI powerhouse; targets about €250 million of run-rate cost savings by year three and about €800 million of revenue synergies, with closing expected by Q3 2027.
> SUMMARY Olivier Blum, CEO · 2026-10-05[10]

Outside view: analysts and industry

> RBC: the deal multiples are reasonable, but the deal raises exposure to AI concerns over industrial software and the integration will be complicated. Jefferies: the fears that allowed a decade-low price could weigh on the shares after the deal.
> SUMMARY RBC and Jefferies analysts, as reported in public news · 2026-10-05[12]

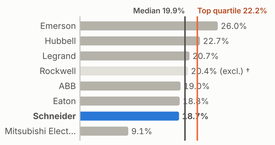

> Shares fell about 8% on the announcement, erasing close to €15 billion of market value; the deal adds €16 to 17 billion of new debt and buybacks are paused.
> SUMMARY Market reaction, as reported by Reuters · 2026-10-05[12]

2 Performance against peers

Peer set

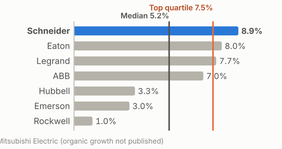

Company	Revenue	FY	Why it is a peer
Schneider Electric SE IFRS. SG&A = support function costs less R&D expensed; balance sheet lines are 'trade and other operating' receivables and payables EBIT: adjusted EBITA: before restructuring, other operating income and expenses, and purchase-accounting amortisation; reported EBIT €6,699M	**€40.2B**	**FY25**	Target
ABB Ltd US GAAP; 2024 as presented in the FY2025 release EBIT: operational EBITA; reported income from operations $6,047M	€29.4B	FY25	Closest like-for-like: electrification and automation, global footprint, similar scale
Eaton Corporation plc US GAAP; no operating-income line EBIT: reported: pretax income plus net interest (no group-level adjusted measure published)	€24.3B	FY25	Electrical products and systems with heavy data-centre and utility exposure; the US margin benchmark
Legrand SA IFRS; SG&A and balance sheet not found in extracts EBIT: adjusted operating profit; reported €1,808.5M	€9.5B	FY25	European low-voltage electrical and data-centre infrastructure; IFRS, euro reporter
Rockwell Automation, Inc. Year to Sep 2025; engineering moved out of cost of sales in FY2025 EBIT: segment operating margin as published (no corporate costs); kept out of the EBIT benchmark	€7.4B	FY25	Pure-play industrial automation: the benchmark for Schneider's Industrial Automation business
Emerson Electric Co. Year to Sep 2025; large acquisition amortisation EBIT: adjusted EBITA: before intangibles amortisation and restructuring; reported pretax margin 16.3%	€15.9B	FY25	Process automation plus industrial software (AspenTech): comparable to Schneider's automation and AVEVA mix
Hubbell Incorporated US GAAP; gross margin as published; balance sheet not found EBIT: adjusted operating income: before acquired-intangible amortisation; reported $1,208.8M	€5.2B	FY25	US electrical and utility components: a high-margin electrical products benchmark
Mitsubishi Electric Corporation IFRS; year to Mar 2026; yen billions; cost lines not found EBIT: operating profit before the early-retirement programme (¥105.3B); reported ¥433.0B	¥5,894.7B not converted	FY26	Diversified Japanese electrical and factory-automation group: the Asian benchmark

Data table

	Organic growth	Gross margin	SG&A %	EBIT margin	DSO	DIO	DPO
Schneider	**8.9%**	**42.1%**	**19.9%**	**18.7%**	**89 days**	**84 days**	**146 days**
ABB	7.0%	41.1%	19.8%	19.0%	83 days	109 days	97 days
Eaton	8.0%	37.6%	15.7%	18.8%	72 days	101 days	89 days
Legrand	7.7%	50.8%	n/a	20.7%	n/a	n/a	n/a
Rockwell	1.0%	48.1%	n/a	20.4%	84 days	105 days	78 days
Emerson	3.0%	52.8%	28.3%	26.0%	63 days	95 days	59 days
Hubbell	3.3%	35.3%	14.6%	22.7%	n/a	n/a	n/a
Mitsubishi Electric	n/a	n/a	n/a	9.1%	n/a	n/a	n/a
Peer median	**5.2%**	**44.6%**	**17.8%**	**19.9%**	**77 days**	**103 days**	**84 days**

3 Case for change

1 Margin, not growth, is the gap, and management's 2030 plan already claims it

EBIT margin: bottom quartile · RECOMMENDED LEAD

EBIT margin	SG&A %	Gross margin
18.7%	**19.9%**	**42.1%**
median 19.9% · top quartile 22.2%	median 17.8% · top quartile 15.4%	median 44.6% · top quartile 50.2%

Schneider ranks 1 of 7 on organic growth but 6 of 7 on adjusted EBITA margin, level with ABB (19.0%) and Eaton (18.8%) and behind Legrand, Hubbell and Emerson. Closing to the median and top quartile is worth €451M–€1.4B, or 112–345 bps: the same order as the margin step set out at the Capital Markets Day. Against Eaton and Hubbell the difference is support functions (19.9% of revenue against 15.7% and 14.6%); against Legrand and Emerson it is gross margin.

See quote from Schneider Electric, Capital Markets Day, as reported by Reuters, 2025-12-11[6]

Client readiness: high It restates management's own margin ambition with peer evidence; the discussion is pace and levers, not direction.

2 Industrial Automation is the margin lever that data centres will not pull

EBIT margin: bottom quartile

EBIT margin
18.7%
median 19.9% · top quartile 22.2%

Automation peers earn 20.4% (Rockwell, segment margin) and 26.0% (Emerson, adjusted EBITA), well above Schneider's group margin of 18.7%, and Industrial Automation earns less than the group. Management has a recovery plan with a 2028 target; every point it gains lifts the group without relying on the data-centre cycle.

See quote from Schneider Electric management, H1 2026 results call (speaker not named in the extract), 2026-07-30[7]

> In H1 2026 Energy Management earned an adjusted EBITA margin of 22.4% and Industrial Automation 14.0%.
> SUMMARY Schneider Electric, H1 2026 results release · 2026-07-30[9]

Client readiness: high Management set the plan and reports on it; the conversation is about speed and levers.

3 Growth is a strength; PTC is a bet on the next leg

Organic growth: top quartile

Organic growth
8.9%
median 5.2% · top quartile 7.5%

Organic growth of 8.9% is top quartile against a median of 5.2%, so the growth bucket shows no gap. PTC adds design and engineering software to AVEVA; the market's first reaction questions the price of AI exposure and the leverage, so the integration case needs to show its cost and revenue synergies early.

See quote from Olivier Blum, CEO, 2026-10-05[10]

See quote from RBC and Jefferies analysts, as reported in public news, 2026-10-05[12]

Client readiness: moderate Management calls the deal strategic while analysts are sceptical; lead with the growth evidence and keep the deal discussion on integration.

4 Receivables are the one working-capital gap, and PTC makes cash matter more

DSO: bottom quartile

DSO	DIO
89 days	**84 days**
median 77 days · top quartile 69 days	median 103 days · top quartile 99 days

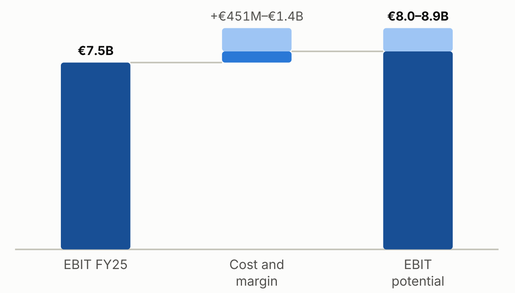

Receivables run 89 days against a peer median of 77 days (rank 5 of 5), worth €1.3–2.2B one-off; inventory days of 84 days are already top quartile. Part of the gap is how Schneider presents its balance sheet, so test it before using it; if it holds, it would offset part of the new debt for PTC.

See quote from Market reaction, as reported by Reuters, 2026-10-05[12]

Client readiness: low Not on management's public agenda and partly a definition effect; raise it as a question, not a finding.

4 Size of prize

EBIT bridge on the latest year, with the gaps closed

EBIT margin 18.7% → **19.9–22.2%**

Bucket and gap to peers	Baseline	Opportunity	As %
Commercial: revenue growth already top quartile on growth	€40.2B Revenue, FY25	—	
Cost and margin: EBIT-margin gap +11 pp to median · +3.5 pp to top quartile	€32.6B Operating costs, FY25	**€451M–€1.4B**	1.4–4.2% of operating costs 112–345 bps of margin
Recurring EBIT, sum of the rows above		**€451M–€1.4B**	

One-off cash: working capital €1.3–2.2B

DIO: already top quartile
DPO: already top quartile

Why the value is real

Cost and margin: EBIT-margin gap
Management's own levers: the 2030 margin ambition, pricing and industrial productivity, support costs growing slower than sales, and the Industrial Automation plan. The high end assumes Legrand- and Hubbell-level margins, which rest partly on mix and acquisition accounting.

See quote from Schneider Electric, Capital Markets Day, as reported by Reuters, 2025-12-11[6]

See quote from Schneider Electric, FY2025 results presentation, 2026-02-26[2]

Working capital
Rests on receivables alone; inventory and payables show no gap. Schneider's line covers trade and other operating receivables, and some receivables are factored off balance sheet, so check the ageing before quoting it.

Commercial: revenue growth
Already top quartile on organic growth; the 2026 guidance raises widen the lead.

Questions to test with management

- How much of the margin gap to Legrand, Hubbell and Emerson is mix (software, premium products, acquisition accounting) and how much is support-function cost?
- What does the Industrial Automation recovery plan add to group margin by 2028, and which levers carry it?
- What support-function cost ratio does the 2030 margin ambition assume, before and after PTC?
- With PTC's debt and paused buybacks, does receivables collection become part of the cash plan?

5 Method and sources

- Every figure comes from a public filing, results release or investor presentation, listed below. Nothing is estimated to fill a gap: a missing value shows as n/a with its reason.
- Benchmarks are the median and top quartile of the peers that report the metric; the target is never in its own benchmark. Top quartile follows the metric's direction.
- EBIT is each company's adjusted operating income where it publishes one, and reported operating income otherwise; the peer table names the basis per company. Gross margin is revenue less cost of sales. SG&A is benchmarked as one combined line, because peers split it differently.
- Sizing closes the gap to the peer median (low) and the top quartile (high), on the latest year's revenue. Growth (organic, as each company reports it) compounds for 3 years to FY28 and converts to EBIT at the stated margin. Cash is one-off and never added to EBIT.
- Cost is sized as one EBIT-margin gap, because peers' cost lines are not comparable; it is never added to separate cost-of-sales or SG&A buckets. Totals are the sum of the rows shown. This is a sniff test of where value may sit, not a commitment: it has no practitioner experience, case examples or management data behind it.

Limitations

- EBIT basis is mixed. The rule is to switch to adjusted figures when one-offs distort the latest year, and they do: Rockwell carries a goodwill impairment and other charges, Mitsubishi Electric an early-retirement programme, Schneider doubled restructuring. Each company is on its own adjusted measure (EBITA-type for Schneider, ABB and Emerson; adjusted operating profit for Legrand, Hubbell and Mitsubishi Electric); Eaton publishes none at group level and stays on reported pretax income plus net interest.
- Measures that exclude acquisition amortisation flatter acquisitive companies, Emerson most; on reported EBIT Schneider's margin is lower (see the peer table).
- Siemens is not in the set: its comparable businesses are segments of a group that also holds Mobility, Healthineers and Financial Services, with no segment cost of sales, SG&A, working capital or combined organic growth.
- Cost and margin are sized on the EBIT-margin gap, not on gross margin and SG&A separately: the two lines trade off across business models, R&D sits in different lines (Schneider books part of it in cost of sales; Rockwell moved engineering out of cost of sales), and SG&A is available for only four peers.
- The working-capital benchmark rests on four peers; Schneider's year-end balances are the restated comparatives in its H1 2026 accounts.
- Fiscal years differ (Rockwell and Emerson to September, Mitsubishi Electric to March); USD revenue is converted at the calendar-2025 average; growth is each company's own organic, comparable or underlying measure. No valuation or TSR was collected.
- Rockwell left out of the EBIT margin benchmark: Rockwell: only a segment-level margin is published (it leaves out corporate costs), and the reported FY2025 result carries a goodwill impairment and other one-off charges, so it is shown but kept out of the EBIT-margin benchmark
- 28 of 28 sources could not be opened and were read from search extracts (marked ▪ below). Check those figures and quotes against the documents before client use.

PUBLIC-DATA TEASER

Refer to dev.opcat-nonprod.bain.io for the full Opportunity Catalyst experience.

This poster shows where value may sit, from public data. Opportunity Catalyst adds Bain experience behind every lever, numbers you can change in the room, and a source behind every figure.

	THIS SCAN	OPPORTUNITY CATALYST
Benchmarks	Peer median and top quartile	Plus Bain experience ranges by lever
Data	Public filings, as reported	The case team's data, source-labelled, adjusted EBIT
Changes	Edit a file and rebuild	Change peers, levers and assumptions live; undo any change
Traceability	A numbered source list	Drill any number to its formula, inputs, peers and adjustments
